Abstract or corresponding occurrent: WD9628648

Disclosed are noncarbonated beverage products with improved microbial stability, and processes for preparing them. The noncarbonated beverage products have a pH of between 2.5 and 4.5 and comprise from about 300 ppm to about 3000 ppm of a polyphosphate having an average chain length ranging from about 47 to about 60; from about 100 ppm to about 1000 ppm of a preservative selected from the group consisting of sorbic acid, benzoic acid, alkali metal satts thereof and mixtures thereof; from about 0.1 % to about 80 % by weight of fruit juice; and from about 80 % to about 89 % by weigh of added water, wherein the added water contains from 81 ppm to about 220 ppm of hardness. These noncarbonated beverage products can be stored at ambient temperatures for at least; about 28 days without substantial microbial profileration therein after exposure to beverage apollance organisms. proliferation therein after exposure to beverage apoilage organisms.
